

Force Cane™

How useful can an intelligent cane be?

- Designed to optimize walking function, speed and safety
- Assists with gait retraining by providing feedback using a pressure sensor embedded in cane
- Easy to set up, simple and efficient to use daily during rehabilitation
- Choice of either auditory or vibratory feedback
- Feedback given when weight falls between two force limits set by therapist encouraging patient to either increase or decrease load through lower limb
- All load and threshold data can be sent wirelessly and displayed in real time on a PC
- Appropriate for neurological and orthopedic pathologies
- Wireless option available
- Designed and made in Australia
